Height: 30 feet

Spread: 3 feet

Sunlight: ○ ◐

Hardiness Zone: 3b

Other Names: Anna Hardy Kiwi, Bower Actinidia

Description:

A fast growing, vigorous climbing vine selected for its delicious, edible, grape sized Kiwi fruit, that hangs in bunches and may be harvested in fall; requires a male pollinator to set fruit; very hardy and adaptable; a good ornamental vine as well

Edible Qualities

Ananasnaya Female Hardy Kiwi is a woody vine that is commonly grown for its edible qualities, although it does have ornamental merits as well. It produces small green oval fruit with a red blush which are usually ready for picking from early to mid fall. The fruits have a sweet taste and a fleshy texture.

The fruit are most often used in the following ways:

- Fresh Eating

Features & Attributes

Ananasnaya Female Hardy Kiwi features dainty fragrant white buttercup flowers with yellow anthers along the branches from mid to late spring. It has dark green deciduous foliage which emerges light green in spring. The large serrated heart-shaped leaves turn yellow in fall. It features an abundance of magnificent green berries with red blush from late summer to mid fall.

This is a dense multi-stemmed deciduous woody vine with a spreading, ground-hugging habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage. This is a relatively low maintenance plant, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Aside from its primary use as an edible, Ananasnaya Female Hardy Kiwi is sutiable for the following landscape applications;

- Hedges/Screening
- General Garden Use
- Orchard/Edible Landscaping

Planting & Growing

Ananasnaya Female Hardy Kiwi will grow to be about 30 feet tall at maturity, with a spread of 3 feet. As a climbing vine, it should be planted next to a fence, trellis or other rigid structure where it can be trained to grow upwards on it. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 15 years. This is a dioecious species, meaning that individual plants are either male or female. Only the females will produce fruit, and a male variety of the same species is required nearby as a pollinator.

This woody vine can be integrated into a landscape or flower garden by creative gardeners, but is usually grown in a designated edibles garden. It does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
